Theoretical discussion

- Discuss how your team used GitHub to collaborate. You will need to reference your GitHub assets in your final portfolio.

Collaboration

We decided to split the responsibilities of each section and assign them to smaller groups within our group.

Section 1 (Constaan and Jason): Should be complete by Thursday Night, meaning all info is organized in the Github folders and files.
Section 2 (Will, Josh and maybe Devin): complete by Friday Night
Section 3 (Devin and Everyone else): Done by Saturday Morning
So go through assignment guidelines and divide your work with your partners, don't forget to keep track of your contributions on GitHub

Section one was assigned to Constaan and Jason
Section two was Will and Josh
Section three was Me.

Once these groups were established, along with the due dates for each section, we started to work in our own documents.

The problem with working in individual (non shared) documents is collecting and assembling all the information once each section is done.

This is where GitHub comes in. GitHub allowed us to upload our individual documents in the respective folders. The folders allowed us to organize our project by sections.

📄 README.md

Everytime we were to update a file or even create new files we created a commit message that explained the changes made so we could keep up with what needs to be done.

added Section: 3 Point A

1 parent 7d1c900   commit 422ed6d8346b7dc87b5c3f81d482a28d29c8f6b1

Once all our final documents were uploaded we were then able to download from these folders and use the documents to create this final project.
